#### **5. Additional Prior Art:**

US pat. 5,860,067 (Onda et al.) discloses user interface scheduling system with time segment creation and selection, where selecting a segment is done by a mouse, a cursor of the mouse must be placed and clicked at a point in the display field of the segment. When the segments are consecutively selected by the mouse by repeating this action for five times, the five segments are selected all together. When the mouse is moved and a new location is designated, the selected segments are moved to the new location in the window or in another window.

US Pat. 6,058,379 (Odom et al.) discloses Real-time network exchange with seller specified exchange parameters and interactive seller participation, and the auction phase represents the termination of the ability of multiple bidders to bid in an individual auction. When there are multiple concurrent auctions, the starting and stopping times may be staggered based on factors such as, but not limited to, activity,

bid volume, price, or category. The schedule is posted when finalized, which may occur during the first interval phase. Any outstanding resting bids are processed during this phase. None of the additional prior art renders the claims obvious.
